Intro to MongoDB

MongoDB

🧩 EXPERIENCE

Chat bot using API

While building the chatbot AI with an API, I gained practical experience in integrating external AI services into applications. I learned how to send and process API requests, handle JSON responses, and design conversation flows that interact smoothly with the AI. I also worked on managing authentication keys, handling errors, and optimizing response times for a better user experience. This project improved my skills in API integration, debugging, and creating interactive, AI-driven applications.

Dashboard

While creating the Activity Noticing Dashboard with Chart.js, I gained experience in visualizing data effectively through interactive charts and graphs. I learned how to fetch and process data dynamically, configure chart types, and customize styles, labels, and tooltips for better readability. I also worked on making the dashboard responsive and user-friendly, ensuring it could adapt to different devices. This project enhanced my skills in front-end development, data visualization, and turning raw information into clear, actionable insights.
